

Horizontal Sand Filters by Nemato

Due to oil, prices subject to change without notice.
Please call.

Horizontal filters have become very common in the past 10 years and Nemato is the industry leader. The key advantage of this configuration is the ease with which they fit into a filter room (the 34 inch version goes thru a standard doorway) and the space efficiency of a stacked pair.

For retrofits in particular, the ability to place the filter makes this filter the best choice for many applications. The filter is available in 34", 42" and 60" diameter tanks each diameter is available in several lengths. The tank design with an inlet and outlet at both ends offers the greatest possible plumbing flexibility. All sizes are stackable for extra capacity in a limited space. Gauge panel houses two liquid-filled pressure gauges. High quality gel coat tank finish is dove gray. Dial valve on face piping is optional.

Our recommendation: the 42 or 60 inch models offer a deeper sand bed and it is much easier to service internals, making these sizes the first choice for any application. The 34 inch horizontal filter should be reserved for applications where physical space leaves no alternatives.

Horizontal filters are rated at 15-US gal./sq. ft./minute. If space allows we recommend sizing your filter to run at 10-12 US gal./sq. ft./minute for the best possible filtration.

Pricing is FOB Factory.

Item No	Filter Model	Area/sq ft	Flow Rate @ 15 GPM	Pipe Size	Filter Sand/lbs	Length	Price
