

Palintest Electronic Pool Test Kits

Palintest of England makes electronic test kits for pools. These kits are based on reagents colouring water samples which are read by a photo meter for accuracy. These are high quality units with accuracy in measuring, reliability in electronics, and consistent testing as operator interpretation is removed. The reagents are tablets packaged in foil strips.

The **Pooltest Photometer 5** is a very simple tester, 2 buttons, that tests for Free Chlorine, Total Chlorine, PH, Cyanuric Acid, and Alkalinity. The readout is in MG/L (PPM), or PH units, to 2 significant digits. It comes with a hard case, and enough reagents for about 20 tests.

The **Pooltest 9 Professional Pool Photometer** has a button for each test, is waterproof, and tests for Free Chlorine, Total Chlorine, PH, Cyanuric Acid, Alkalinity, Ozone, Calcium Hardness, Copper, and Bromine. The readouts are in MG/L or PPM, and units of PH, to 2 significant digits. It comes with a hard case, and enough reagents for 20 tests.
