

## Jacuzzi Series VM Filter Pumps

Series VM Self-Priming Filter Pumps incorporate several important features which contribute to good performance and long life.

- Double-volute casing allows rapid air separation and water circulation during the priming cycle and reduces the radial thrust on the impeller.
- Closed impeller is mounted on the motor shaft and requires no adjustment to maintain performance.
- Mechanical shaft seal requires no attention and is ideal for continuous operation without supervision.
- Flanged suction and discharge connections. 4" x 3".
- Very efficient pumps that move a lot of water for the horsepower.
- Recommended for use with fibreglass filters because of the low shut-off head 45 PSI.
